

# Our Condenser Water Family

"We Have the Good Stuff"

**We "have the good stuff,"** according to the engineers and owners who work closely with us. Dyna-Tech has nearly thirty years of experience in designing and supplying HVAC equipment for critical environments. We represent the best and most trusted manufacturers in the industry, and together their products create high-quality, efficient HVAC systems. Our condenser water family of products, for instance, is comprised of innovative products from Marley Cooling Towers, Puroflux Corporation, Smardt, Dolphin WaterCare, and APV to create reliable, intelligent designs.

Marley Cooling Towers is one of the most recognizable brands in the HVAC industry. Since its inception in 1924, Marley has leveraged its expertise in cooling tower technology and is known for consistently producing valuable solutions for its customers. Their capabilities in evaporative cooling have resulted in numerous successes on a wide range of projects, from five-ton cooling towers to hyperbolic power plants.

As a leading manufacturer for premier water treatment filters, Puroflux Corporation's separators and media filters are used extensively throughout the HVAC industry. Puroflux is highly-regarded for their attentive customer service, as well as their dedication to clean, sustainable designs with long life expectancies.

Dolphin WaterCare has been providing environmentally-responsible water treatments for over a decade. Dolphin's chemical-free water treatment system is utilized globally, and is considered the "gold standard" in treating water systems. Dolphin's pulsed-power system eliminates the sources of corrosion, while maintaining its excellent biological control without oxidizing biocides. Dolphin understands mission-critical water treatment requirements. In fact, Dolphin patented technology is trusted in thousands of facilities where reliable water treatment is essential.

Founded in 2005, Smardt has since established itself as a diverse provider of oil-free chillers that are both well-designed and energy efficient. Smardt is highly committed to green solutions, and ensures that their products offer high IPLV energy efficiencies and low lifetime operating costs.

Having recently celebrated their century milestone, APV has a deep understanding of the HVAC market specifically and offers innovative solutions to meet industry challenges. Their products are an important part of condenser water systems, since they reduce operating pressure and effectively separate contamination from critical processes.

Dyna-Tech's extensive network of outstanding manufacturers, combined with our decades of design experience, allow us to provide customers with unparalleled service and application engineering assistance for their condenser water systems.
